

Join the fight against Alzheimer's disease

If you have Down syndrome, you may be more likely to get Alzheimer's disease. The ABATE Study is testing an investigational vaccine for Alzheimer's.

We want to see if the vaccine is safe. We also want to see if it slows the progression of Alzheimer's disease in people with Down syndrome. The study will last about 2 years.

You may be able to join this study if you:

- Have Down syndrome
- Are between 35 and 50 years old
- Have a study partner
